The Student Polyclinic

The Student Polyclinic of Baku State University operates within the university campus and serves as a central healthcare facility for academic staff and the student population. City Polyclinic No. 30, established in 1990 and located on the university territory, provides comprehensive medical services aimed at protecting and improving the health and well-being of thousands of university members. The polyclinic plays an essential role in maintaining a healthy campus environment, which directly supports the university's sustainable campus management and student welfare initiatives.

The polyclinic is staffed by 19 qualified doctors and 18 paramedical personnel, ensuring continuous and professional healthcare support. It includes a wide range of specialized medical units such as therapy, ophthalmology, physiotherapy, surgery, dentistry, neurology, rheumatology, otorhinolaryngology (ENT), cardiology, laboratory diagnostics, and ultrasound examination (USM). These services enable the early detection, treatment, and monitoring of various health conditions, thereby supporting preventive healthcare and reducing health-related risks among students and staff.

Modern diagnostic and treatment equipment is available in the facility. Patients are examined using ultrasound devices, physiotherapy equipment, dental instruments, and other medical technologies. The laboratory conducts both biochemical and clinical analyses. Biochemical testing includes indicators such as rheumatism markers, triglycerides, cholesterol levels, glucose, ALT, AST, and hormone profiles. Clinical laboratory services include general blood tests, hemoglobin measurement, erythrocyte sedimentation rate (ESR), urine and fecal analysis, leukocyte testing, and malaria screening. These services contribute to continuous health monitoring and timely medical intervention.

A dedicated medical office also operates at the “Young Talents” High School affiliated with the university. The physician and nurse assigned to this unit conduct regular medical examinations and health monitoring for students, ensuring early diagnosis and preventive care at the pre-university education level.

The polyclinic is supplied with medicines and essential medical materials by the Baku General Health Department, ensuring the continuous availability of medical resources. Specialized services provided in different departments include comprehensive eye examinations such as refraction testing, visual acuity measurement, prescription of corrective lenses, examination of ocular membranes, fundus assessment, and intraocular pressure measurement. Dental services include treatment of caries, pulpitis, and periodontitis; management of gum diseases such as gingivitis and periodontosis; removal of dental calculus; X-ray diagnostics; and cosmetic procedures such as teeth whitening.

Ultrasound (USM) and electrocardiography (EKG) services enable examination of abdominal organs, pelvic organs, thyroid and mammary glands, and Doppler assessment of upper and lower limb blood circulation. Cardiac activity is monitored through a three-channel electrocardiography device, supporting early detection of cardiovascular conditions. Laboratory services also include hemostasis testing, infection diagnostics, and hormone level determination, ensuring comprehensive clinical evaluation.

STATE
UNIVERSITY**

Physiotherapy services address a variety of health conditions, including joint diseases such as arthrosis and arthritis, lumbar radiculitis, varicose veins, sinusitis, rhinitis, and tonsillitis. Rehabilitation procedures are also provided to support recovery after trauma and surgical interventions, improving patients' physical functionality and overall health outcomes.

During the special quarantine regime implemented nationwide to combat the COVID-19 pandemic, the polyclinic staff played an active role in organizing awareness campaigns, conducting health screenings, and implementing preventive measures among students and employees. Two dedicated rooms were established and equipped with the necessary medical supplies to manage infection prevention and control. In accordance with the national Vaccination Strategy against COVID-19, the polyclinic actively participated in vaccination campaigns for university staff and students. A mobile vaccination station was established in cooperation with national healthcare authorities, including registration, examination, and vaccination rooms equipped with appropriate medical supplies.

As of 2025, the polyclinic continues to strengthen its role within the university's infrastructure by maintaining modern healthcare standards, expanding preventive medical services, and supporting health education initiatives. Regular health monitoring programs, awareness campaigns on hygiene and disease prevention, and accessible on-campus medical care contribute to creating a safe, inclusive, and sustainable learning environment. The continued modernization of medical services and the availability of comprehensive healthcare facilities demonstrate the university's commitment to safeguarding public health and supporting sustainable campus development in line with international sustainability and well-being standards.

This integrated healthcare infrastructure significantly enhances campus safety, supports student and staff productivity, and contributes to the overall sustainability and resilience of the university environment.

Additional evidence link (i.e., for videos, more images, or other files that are not included in this file):

Baku State University has established a comprehensive health support system to ensure the well-being of students, academic staff, administrative personnel, and, where applicable, members of the wider public. The university provides accessible first aid services, emergency medical response capacity, and on-campus or affiliated clinical support facilities staffed by certified medical professionals.

The health infrastructure is designed to ensure timely medical assistance in case of emergencies, with clear referral mechanisms to specialized healthcare institutions and hospitals when required. First aid stations and emergency response points are available to provide immediate assistance, while trained personnel are present to manage urgent medical situations effectively.

In addition, the system is integrated with external healthcare providers to ensure continuity of care beyond initial emergency response. This coordinated approach enhances the safety, well-being, and resilience of the campus community, while maintaining accessibility and responsiveness for all users, including visitors and the broader public when needed.
